

Part No.- 90-00047-FC/ST or 90-00047-SC/E2
Title- Compact Wall Box, 8 Fibre

Applications

The 8 Fibre Compact Wall Box is an ideal solution for cost effective, space critical applications. In plain or optional livery format, it is applicable for:

- Wall mounting in small spaces
- Easy access LAN requirements
- Rapid installations
- Subscriber feed/access points

Features

Suitable for either 8 fibre SC & E2000 or FC & ST applications. Using a hinged UL94-V0 rated fibre management cassette, the 8 Fibre Compact Wall Box has two aligned cable entry/exit points, one top and one bottom (compression gland provided).

There are 2 interchangeable bulkhead plates to suit the chosen connector types of either SC & E2000 or FC/PC & ST. The output location of the bulkhead can be orientated either upwards or downwards, because the box features both a removable lid (via four ¼ turn fasteners), and three double-keyhole style mounting holes in the base.

Of lightweight construction, all tube & fibre storage is possible beneath the hinging cassette owing to the compact nature of its design. The external fitted dimensions of the box are 150mm(W) * 210mm(H) * 70mm(D). Depending on volume, custom livery can be prepared for clients.
